

AAI Craftsweld Welding Stinger WB2 Underwater Electrode Holder

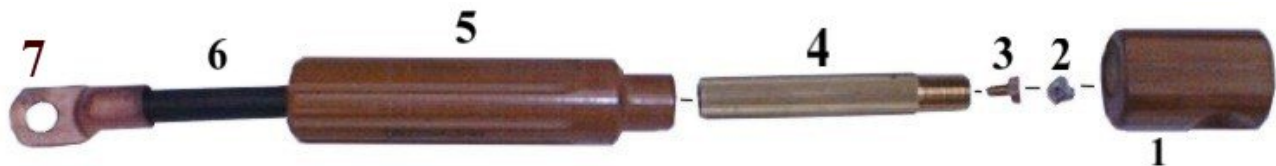

AAI Craftsweld Underwater Electrode Holder is fully insulated and specifically designed for underwater use. The Head and Handle are made w/ laminated phenolic w/ a large, tapered opening in the Head to permit "blind" feeding of new electrode, without fumbling. A slight turn of the Head secures the electrode against the interior copper Contact Stud on the end of the brass Core. The Contact Stud has a hex head for easy replacement w/ standard tools. Head unscrews completely for access to Contact Stud. The Cable is sweated into the Core to provide full and efficient flow of the electrical current.

Model WB-2 Welding Electrode Holder comes complete w/ 5' of flexible #1 stranded copper welding cable w/ abrasion, tear, and oil-resistant jacket. The lighter #1 cable allows precise manipulation for better welding without sacrificing good current flow. Cable terminates in standard copper Lug (sweated).

Specifications

7" Long

10 ounces (2 lbs including cable and lug)

Item	Part No	Description
1	WB2-H	Head
2	WB2-SSCREW	Bearing Screw - SS
3	WB2-CS	Contact Stud – Terillium 7/16 X 9/16
4	WB2-B	Core
5	WB2-C	Handle
6	WB2-CASS	Cable Assembly - 5', Size #1
7	WB2-L	LUG

Parts #4, #5, and #6 sold as Assembly only.
